

Announcement of the seminar 21359

Teaching Seminar: Theoretical Chemistry

Friday, 10:30 in 23.01, start 09.05.2014

Further informations (program) on the webpage “agpaulus” under teaching

Content of the Seminar:

The idea of this seminar is, that master students and PhD students strengthen their knowledge in new methods used in Theoretical Chemistry, both in Electronic Structure Theory and Quantum Dynamics. Each participant should prepare a talk and discuss a new topic in the field.

With the own talk and the attendance of 12 talks (also from research seminars or colloquia) the student can receive 3 credit points. The mark is determined by the quality of the own talk.

Additional the seminar is used for presenting the results of the research internships in Theoretical Chemistry.

If required, the talks can be given in German, too.
